### Assembly of feet and pan support

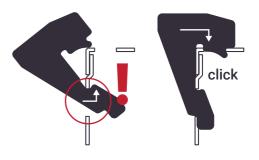

Turn stove upside down and place plastic foot over bottom rim and align with slot. Push snap pin through slot. This will bend the metal lip to secure the foot in place.

Next, insert the 5 metal pan supports into the slots around the top rim.

around the bottom rim.

Turn stove right-side up and insert lower end of pan support into vertical slot. Push pan support upwards until upper end slides over rim and clicks into slot on top.

Leave 1cm between fuel and upper holes of burner

Light fire

Turn fan on. Adjust fan to speed 1 to get a good flame going

When you have a well-burning, ,circular flame, adjust fan speed to between 3 and 4 Attention: We recommend that you DO NOT run the fan at it's highest speed!

Maximum fan speed will increase the intensity of airflow, resulting in:

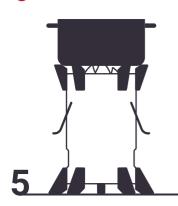

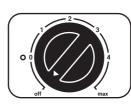

inefficient pellets use

more pollution

Start cooking

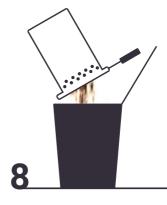

6

Use stove until all flames have extinguished and only glowing embers are left

Attach burner handle and remove burner

Empty burner into a fireproof container with lid

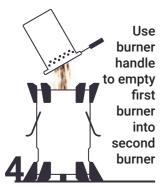

# To continue cooking when only glowing embers are left

Fill second burner with fuel up to 1cm below upper holes

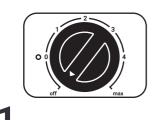

Turn up fan speed until flames appear from upper holes

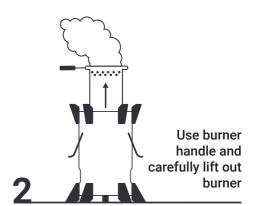

Regulate flames by adjusting fan speed, and continue cooking

# What if the stove is producing a lot of smoke?

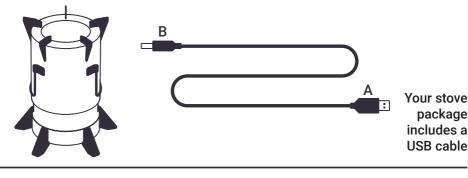

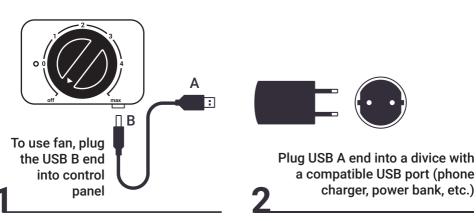

Turn fan off, stop cooking and avoid inhaling smoke

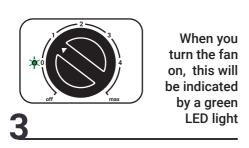

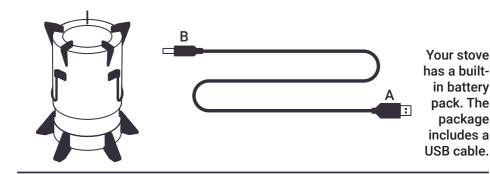

## Stoves WITHOUT battery pack

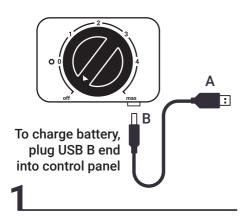

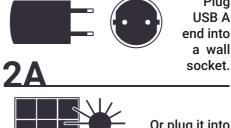

#### Stoves WITH built-in battery pack

Or plug it into a solar panel that is placed in the sun.

Plug

A red LED light indicates battery is charging. When it turns green, charged.

battery is fully

A green LED light indicates fan is running on battery power. When it turns orange, 80% to 20% power remains.

When it turns red, less than 20% power remains, and battery should be recharged.

# Warnings

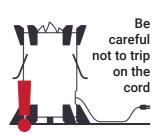

Do not carry stove while it is burning

### Warnings

Leave 1 cm between the fuel and upper holes of burner

Do not use charcoal as fuel
